# As was the case last year, the *D&Ri100* paints a mixed picture of the state of health of the demolition industry around the globe. LINDSAY GALE reports

# Swings and

he headline figure from this year's **D&Ri100** listing would suggest that the demolition sector has seen a solid recovery from the nadir of the downturn, with the total revenues generated by the 100 companies in this year's report falling just short of the record total for 2007 (US\$4,781.5

million) by just US\$88 million, at US\$4,693.5 million. So a good time for all then?

No, such appearances are deceptive. When analysed, the data paints a very different regional picture. The 30 North American companies on the list contribute US\$1,955.8 million to the combined total, while

the 62 European contractors featuring added US\$2,371.4 million in earnings. Taking a simple average, that is US\$65.2 million per North American company against US\$38.2 for their European counterparts. And a number of the leading North American contractors indicate substantial growth in earnings (in

## Sourcing the data

This year we devoted considerable resources in trying to encourage contractors around the world to supply basic financial data concerning their activities during 2011. Where we were unable to obtain information from companies themselves, independent financial reporting services were consulted to obtain information. No estimates were used in the compilation of the **D&Ri100**.

We have endeavoured to ensure the accuracy of the figures used in the creation of the **D&Ri100** ranking of the world's top demolition companies but KHL can accept no liability for any errors or inaccuracies relating to the individual turnover figures contained in this report.

I would like to encourage all companies that receive future requests for data for the **D&Ri100** to respond, as the greater the level of response from contractors around the world, the more accurate and comprehensive future listings will be.

## Currency conversion

Data that was supplied to *D&Ri* in currencies other than the US Dollar have been converted using the relevant exchange rates as of 1st May 2011.

## roundabouts Regional breakdow

one instance almost four-fold), whereas the leading European contractors, with very few exceptions, report a further fall in earnings during the last year. Overall, the European share of the pie fell by a further 10% against the corresponding number for 2010, so the well-documented economic challenges facing this region are

obviously still being experienced by European contractors. With massive reductions in government spending almost universal across Europe and the near total collapse of the residential construction industries in many of the countries in the region, times have certainly been tough. The figures themselves almost indicate a double dip recession has occurred in the region. The European industry almost flat-lined during 2008 and 2009, with a slight recovery indicated in 2010 but in 2011 earnings fell back to the 2008 level.

For the first time in several years, the Top 5 is a purely North American affair (although

the 11-20 slots are all occupied by contractors from outside this region), with McMahon Services from Australia leading the chasing pack from the first time.

The North American industry clearly hit its downturn during 2009, with the **D&Ri100** total revenues for that region falling more than 20%. It then bumped along the bottom over the course of 2010, but anecdotal evidence has suggested in recent months that a recovery is underway, albeit a slow one. The numbers certainly seem to bear this out, with the North American share of the 2012 total rising by almost 30% on last year's corresponding number. Indeed, this increase has more than compensated for the relatively poor performance of the European region.

Despite the above, of note is the fact that almost twice as many contractors report revenues in excess of US\$100 million in 2011 against the corresponding list last year, with 11 companies reporting results of this magnitude or greater against the six on the 2011 D&Ri100.

Turnover performance on previous year: 10 Up • Static • Down • New entry

At this point, I have to add the usual caveat concerning the data. Where companies have not supplied data themselves, independent financial reporting services are used to obtain the figures - we never include an estimate of earnings for companies, no matter how well informed. This has obvious pitfalls, however, as evidenced by the return of Penhall to the top 10 spot - last year, the only number we could obtain resulted in this company falling to 98 on the list despite its obvious scale of operation. Texas-based Cherry is another that suffered from this factor last year, when it fell to 120 on the list. This year it is back to its rightful position in the top quarter of the listing.

Another issue that further complicates matters is that it is often impossible to separate out earnings from nondemolition related activities, such as groundworks, that many companies carry out from the totals we gather, something that should be borne in mind when looking at the data.

As a result of our not making use of estimates, there are also a few mid-sized contractors missing from this year's list because we have been unable to obtain even basic figures for them, and >12 they have declined to share their financial data with us (a common issue with privately owned companies). Thus the absence of Robinette, Nagaisangyou, CA de Groot and Demosten, to name just four, should not necessarily be taken to mean that their performance has been so affected by economic conditions as to result in them falling below the D&Ri100 threshold, which this year stands at US\$10.8 million (the corresponding number last year was US\$10.4 million).

The star performer in 2011 in North America, according to this year's D&Ri100, is Canadian outfit Quantum Murray who has jumped from 19th last year to second place with a 361% increase in reported revenue and NASDI with a 262% increase.

In Europe, star performers are a rarer commodity, given the economic conditions pertaining to this region of the world, but of note are the performances of AF Decom (+196%), Lee Group (+198%) and Erith (+133%), bucking the trend somewhat, given that the majority of European contractors indicate a downturn in revenue as discussed above.

Of course, direct comparisons

Turnover performance on previous year: 10 Up • Static • Down • New entry

with previous years' data is complicated by the fact that non-US company data is converted into US\$ at the exchange rate current at the time of going to press, and this naturally can and does vary substantially over time - four years ago, the rate for UK pounds sterling was almost £1: US\$2 whereas the rate used for this **D&Ri100** was £1: US\$1.63. In addition, the data sourced for each company gives the total turnover (sales) value during the year, with no indication of gross or net profit levels.

#### Not included?

If your company does not appear in the **D&Ri100** listing and you believe that it should be included in future reports, please contact the editor, Lindsay Gale at: lindsay.gale@khl.com or by post to the address below.
